

Device-level energy management solutions

Overview

Save money on energy, maintenance and operations

Our energy management platform brings transparency and visibility to energy usage, saving your enterprise money. We offer real-time circuit-level energy measurement that gives you actionable analytics and monthly reports for more informed decision-making to reduce energy, maintenance and operation costs, and to improve facility performance.

Energy savings:

Discover precisely where your energy expenditures are taxing your enterprise's resources, at a fraction of the cost of traditional energy management systems.

Facility operation visibility:

Improved production performance and visibility with device level energy data and robust benchmarking capabilities.

Preventative maintenance:

Identify unseen problems and predict failures through real-time alerts, before they lead to thousands of dollars in wasted energy and/or equipment failures.

Operational cost reduction:

Quickly determine through unit benchmarking when systems are not functioning properly to detect hidden operational inefficiencies and energy waste.

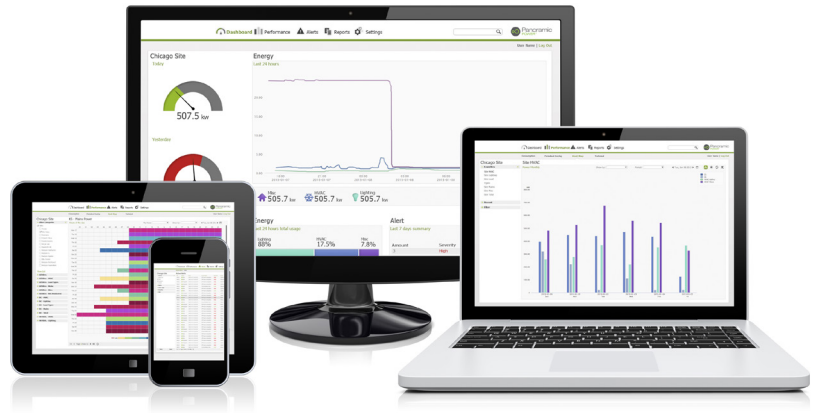

The panoramic power energy performance platform

Award-winning technology

- Self-powered, wireless, maintenance-free sensors
- Predictive analytics, trend analysis and historical comparatives
- Real-time alerts for exception-based reporting that notify on equipment failures & unusual energy consumption patterns
- Rapid deployment across multiple sites with turn-key, low cost installation and a zero disruption to business

Customer results

Supermarket chain
early notification
of condenser failure

\$7,800
savings p/m

Industrial manufacturer
Identified idling conveyor
belts Increased revenue by

\$270,000

CPG manufacturer
Reduced monthly energy
costs by

9% in manufacturing site
and by
54% in distribution center

Global retailer
Reduced energy
consumption by

13%
