

Battery Storage in a nutshell

Keeping power in reserve

Product series
September 2017

The Power of Battery Storage

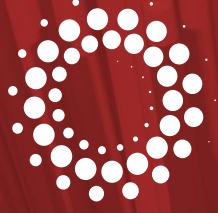

Powering Resilience

Battery Storage will help ensure your business is ‘always on’ by removing the risk of disruption and ensuring continuity of your operations

Powering Performance

Battery Storage will help you generate on-site power and lower costs

Powering the Future

Battery Storage can help power your energy strategy, increase business agility, and create new revenue streams

It pays to protect your business

The way energy is sourced, generated and supplied to businesses is changing. With ever-increasing demand, escalating costs, relentless pressure on the grid and tightening emission compliance targets, businesses need to think smarter and start looking for alternative energy sources.

Many are already turning to renewable technologies but there's still an issue of intermittent supply, so the ability to store generated energy is vital. The advancement of lower-cost, longer-life storage technologies means that batteries are now a viable, effective option.

The evolution of the battery is such that modern lithium-ion battery storage systems can provide sufficient long-lasting energy to buildings and vehicles. They can even help regenerate the grid by exporting excess power. Battery systems from Centrica Business Solutions are fully scalable, can be recharged using renewables, or the grid, and can help provide your business with a number of financial, operational and environmental benefits.

Power your business with new generation batteries

Battery technology has never been more efficient or powerful than it is right now. Battery systems are fully scalable, can be recharged by any power source, including the grid, solar, wind, combined heat and power (CHP), and more. It can help provide your business with a number of financial, operational and environmental benefits.

1. Energy you can rely on

- If the main supply fails, your business stays on
- Batteries work in conjunction with onsite generation
- Flexible storage systems to fit your business size
- Batteries are warrantied

2. Recharge, reuse

- Batteries store any surplus energy
- Recharge during low-demand, low-cost periods
- Provide power for when the costs are at their highest

3. Save money, make money

- Export excess battery charge to the grid via a Demand Side Response (DSR) programme
- Sell excess energy to the short-term power market

4. Better for emissions compliance

- Batteries offer an emissions-free solution and allow you to feed more renewable energy into the grid

Why batteries from Centrica Business Solutions?

From initial site visit and system design to installation and aftercare, we work in partnership with you all the way. Our goal is to help you find the best battery solution for your business. One that allows you to maximise your savings and efficiencies. We will demonstrate potential savings to your specific business, and offer flexible payment options on all of our systems. And all of this is backed up by Centrica's vast industry experience and knowledge of the energy industry.

Want to know more?

Battery storage is generating new opportunities across all types of industry.

Find out how we can help you power new levels of performance today.
