

# Plastic company saves 35% in energy costs with energy insights and CHP solution

FITT selected Centrica Business Solutions to replicate a solution it had implemented previously at a second production plant. The project enabled FITT to respect the environment and make double the savings at the same time.

## No more groundwater

FITT operates in the production sector, manufacturing thermoplastic fluid transport solutions. The company employs a strong policy of innovation, research and respect for the environment and owns a number of facilities. Its two most important facilities are located in Fara Vicentino and Sandrigo in the province of Vicenza, Italy.

Once the work at the production facility in Fara was completed, which involved implementing a 1031-kW containerised trigeneration system, FITT decided to take action at the Sandrigo facility too. It replicated the cogeneration module from the first facility and coupled it with an absorption chiller.

The Sandrigo facility used to use groundwater, but thanks to Centrica Business Solutions' trigeneration unit, which also includes a closed cooling circuit, the facility no longer draws from groundwater.

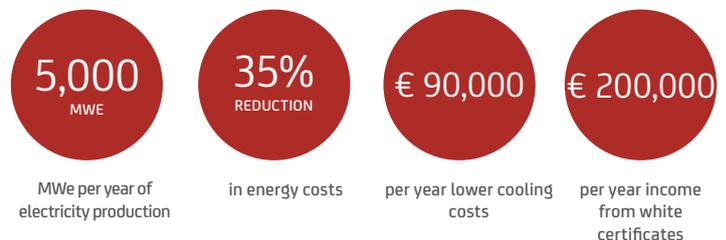

Launched just seven months after the contract was signed, the system also includes energy insights solutions from Centrica Business Solutions, for analysing and monitoring consumption in real time.

## Results

The system will enable the facility to reduce its energy costs by more than a third and save almost €100,000 per year on cooling, while simultaneously reducing its environmental impact in terms of CO<sub>2</sub> emissions and groundwater use.

It is also worth highlighting the value of the white certificates that could be obtained thanks to the trigeneration system. At the Fara facility, they increased in value by 40% in the first year, generating almost €200,000 in annual income for FITT when they were sold.

The Full Service maintenance contract with Centrica Business

## Why Centrica Business Solutions?

- Centrica Business Solutions' cogeneration systems allow energy costs to be reduced by up to 40% compared to traditional sources.
- CO<sub>2</sub> emissions are reduced by up to 30%.
- The absorption chiller system provides 100% of the production site's cooling requirements.
- The energy insights solution allows energy use to be monitored, waste to be reduced and operational efficiency to be improved.
- The partnership with Centrica Business Solutions includes proactive and predictive assistance with administrative processes and everyday and unplanned maintenance, covering all risks for around ten years.

#### Solutions allows

FITT to economise resources in the field, so that they can be allocated for more important business activities. Multinational clients place considerable value on environmental sustainability, giving FITT a competitive advantage in international negotiations.

“

The project wasn't easy, starting from the closed cooling circuit. However, Centrica Business Solutions supported us every step of the way, from the administrative processes all the way through to designing and implementing the system”
